## PV MAINTENANCE INSPECTION MANAGEMENT

### COMPANY

SINGULAIR operates an aerial inspection management platform that helps solar farms owner and operator to assess the operational condition of the PV panels and make decisions on maintenance tasks.

### SERVICES

Through its secured access web platform, SINGULAIR proposes a single point of entry for:

- Asset/plant digitization
- A library of inspection protocols suited to various inspections modes (Optical, Infrared)
- Drone mission planning and assignment within a community of qualified service providers
- Inspections reporting and records management

# SINGULAIR

## PRODUCTS

Our customers can monitor their assets from our platform, plan scheduled or unscheduled aerial inspections, be it for routine inspections, incident response, or even due diligence for asset residual value assessment.

The entire inspections track record for a given plant provide any information on defect location, type and criticality.

We address either ground or roof-mounted solar plants ranging from 1 Kw to 100+ MW. Our platform serves as the perfect collaboration solution for O&M teams who have to manage a portfolio of several sites across various countries.
